The Mains to Mains changeover switch is used where the primary local utility mains supply is backed up by a secondary supply feed into the building. This type of panel is often used for critical loads, such as emergency firefighting lifts. The ATS panel monitors the primary Mains A supply and will transfer the load to the secondary supply if it should fail, or fall outside preset limits. An adjustable delay is included when switching from primary to the secondary supply. A key switch is included to allow manual switching between the primary and secondary supplies. A phase failure relay is used for primary Mains A voltage monitoring and offers Under and Over voltage protection as well as phase sequence. The panel uses two timer relays to control timing functions in the panel. Timer 1 is used to control the Mains A restoration period, this controls the period the Mains A supply has to be healthy before engaging the Mains A contactor. Timer 2 controls the secondary supply switching period, this time period is activated when the primary supply fails and before the secondary supply is engaged. Timer 1 controls the primary Mains A supply restoration period only switching back to primary Mains after this period has elapsed. This ensures the Mains A supply is stable. Supplied with loose gland plate, and door key. Enclosure specification to EN 62208, RAL7035, EN 60529, IK10, EN 6143912.

Cable entry as standard is arranged for bottom entry with a direct connection into the contactors. Please select the appropriate version for your supply. If you have any questions on which ATS panel is right for you please get in touch. We also have mains to generator changeover switches if your backup supply uses a generator.
